

Project Design Phase
Proposed Solution Template

Date	29 July 2026
Team ID	
Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Electricity consumption data is large, complex, and difficult to interpret using raw datasets. There is a need for an interactive solution to analyze consumption trends, identify regional variations, and understand the impact of events such as COVID-19 on electricity usage.
2.	Idea / Solution Description	Develop an interactive Tableau dashboard that visualizes electricity consumption data through charts, maps, KPIs, and filters. The solution enables users to explore state-wise, monthly, and yearly consumption patterns and gain meaningful insights for better decision-making.
3.	Novelty / Uniqueness	The project transforms complex electricity consumption datasets into easy-to-understand visualizations with interactive filtering and comparative analysis, making energy trend analysis faster, more accurate, and user-friendly.
4.	Social Impact / Customer Satisfaction	The dashboard helps government agencies, utility companies, researchers, and the public understand electricity usage patterns, supporting efficient energy planning, sustainable resource management, and informed policy decisions.
5.	Business Model (Revenue Model)	The dashboard can be offered as a data analytics solution for government departments, power distribution companies, research organizations, and energy consultants through subscription-based services, customized reports, or consultancy projects.
6.	Scalability of the Solution	The solution can be easily expanded by integrating new electricity consumption datasets, additional states or countries, real-time data sources, and advanced analytics without significant changes to the existing dashboard.
