Team ID	
	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

"Plugging into the Future: An Exploration of Electricity Consumption Patterns" is a data analysis project that provides an interactive environment for exploring electricity usage trends across different regions and time periods. By transforming raw data into meaningful visualizations, the project helps identify consumption patterns, seasonal variations, and the impact of major events such as the COVID-19 lockdown. It enables users to make informed decisions, supports sustainable energy planning, and encourages data-driven strategies for efficient electricity management and future energy development.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this brainstorming session to identify the factors affecting electricity consumption and select the best problem statement for Tableau data visualization.

- 🕒 10 minutes to prepare
- 🕒 1 hour to collaborate
- 👥 2–8 team members

➔

Before you collaborate

Discuss the electricity consumption dataset, identify important features such as Consumption, Date, Time, Temperature, Humidity, Season, and other related factors, then finalize the project objective.

🕒 10 minutes

Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

Dataset understanding

Explore the electricity consumption dataset and understand its structure, variables and data quality.

Feature selection

Identify key features like Consumption, Date, Time, Temperature, Humidity, Season, Weekday/Weekend, etc.

Tableau planning

Plan how to visualize the data and what insights we want to discover using Tableau.

1

Define your problem statement

How can Tableau help visualize electricity consumption patterns and identify the factors affecting electricity usage?

🕒 5 minutes

Plugging into the future:
An exploration of electricity consumption patterns

Key rules of brainstorming

Stay focused on housing data

Prioritize useful features

Encourage new ideas

Think with data

Listen to every team member

Prepare for Tableau visualization

Step-2: Brainstorm, Idea Listing and Grouping

Project: Plugging into the future: An exploration of electricity consumption patterns.

2 Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

TIP
Write as much as a sticky note and stick the greatest ideas to assist your team win.

3 Group Ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

TIP
Add sentence-like tags to identify topics to make it easier to find, organize, categorize and prioritize insights. Cluster, as a theme within your notes.

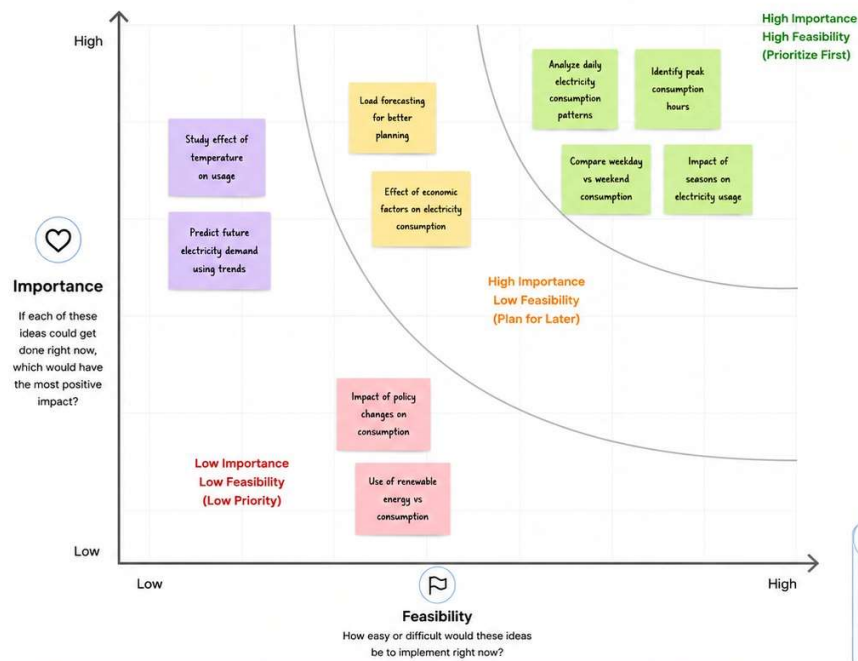

Step-3: Idea Prioritization

4 Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

Prioritize First (Do Now)

Ideas that are both important and feasible. These will have the greatest impact and are easier to implement.

Plan for Later

Ideas that are important but may require more time, data, or resources to implement.

Consider if Possible

Ideas that are important but currently less feasible. Revisit when more resources are available.

Low Priority

Ideas with lower importance and feasibility. These are not the focus right now.

Our Top Priorities

- Analyze daily electricity consumption patterns
- Identify peak consumption hours
- Compare weekday vs weekend consumption
- Impact of seasons on electricity usage

Focus on ideas in the green zone first to achieve maximum impact with available resources.
